## Planning your 8 Trapezoid Circle and Border project

Step 1... pick one of three trapezoid ring options. Unless you have a special reason for choosing the 6 or 12 the 8 trapezoid ring option is usually best.

Step 2... you can plan your project in inches or millimeters but making the trapezoids will be in millimeters. If you think in inches pick inches and vice versa.

Step 3... now that you have some idea of your options and have read all of page 1 , go to page 2 and learn about the inch and millimeter charts.

Available Spreadsheet: If you have Excel or Numbers on your Windows or Mac computer you can download a spreadsheet file called "Trapezoid Strip Width"
from mortonglass.com. Tables from this PDF needed for spreadsheet.

6 Trapezoid Ring... this option requires trapezoids that are made using a 60 degree angle setting on your Portable Glass Shop. This option might be considered if your design is based on the hexagon. The disadvantage of this option is the length and width of the trapezoids needed.

This PDF is for the 6 Trapezoid Ring. Use the PDF named "6 Trapezoid Ring" for this option. Speadsheet table option is named "6 Trapezoid Ring".

8 Trapezoid Ring... this option requires trapezoids that are made using a 67.5 degree angle setting on your Portable Glass Shop. This option might be considered if your design is based on the octagon. This option is usually preferred over the 6 trapezoid option because the strips needed to make the trapezoids are not as wide and yield less scrap.

## The inch and millimeter charts in this PDF are to be used only for the 8 Trapezoid Ring option.

Speadsheet table option is named "8 Trapezoid Ring"

12 Trapezoid Ring... this option requires trapezoids that are made using a 75 degree angle setting on your Portable Glass Shop. This option will require more time to make. An example of how this might be appropriate is as a clock face using two different colors such as black and white in an art deco design.

This PDF is for the 12 Trapezoid Ring. Use the PDF named "12 Trapezoid Ring" for this option. Speadsheet table option is named "12 Trapezoid Ring".

## Sizing the Trapezoids

Making the correct trapezoids for your project is important and the 1st step is to know what you want to make.

A simple sketch for your border project might be a productive way to start. As you look at this plate it is quite easy to see that 8 elements will be needed to make the border and that will lead you to the 8 Trapezoid ring. The black center
 6 inches. We decide that the border will be 1.5 inches wide. Now we know that our plate will be 9 inches. The 9 inch diameter of the plate is what we refer to as the outer circle.

The information we have for the 9 inch plate is all that is needed to determine the strips that will be needed to make the project. The 9 inch outer circle, 6 inch inner circle, 8 sections in the border and circle sizes in inches tell where to look for the information needed for the strips.

Many of you prefer millimeters. Let's define the 9 inch plate as a 228 mm plate and the black center circle as 152 mm . We still need 8 sections but we are now planning in millimeters. The only difference between planning in millimeters or inches is the chart used to find the information.

The examples on page 3 will help you understand the basics. In the USA many of us tend to think and plan our projects in inches. The option to inches is millimeters but no matter how you think or plan the trapezoids are made in millimeters on your Portable Glass Shop.

## Information from the Charts

Some needed information for the 9 inch design above is found on page 4 . Because 9 inches is the outer circle the information needed will be a red number. The red numbers are the length of the trapezoid base in millimeters. For a 9 inch diameter the base length is 100 mm .

If you were planning in millimeters the plate size from above is 228 mm and the information we need is found on page 5 . For a 228 mm diameter the base length is 100 mm .

The inner circle diameter for the plate above is 6 inches. The inner circle information from the
charts will be a green number and will be the length of the trapezoid top. The green number in the 6 inch diameter row, on page 4 , is 55 mm .

The 152 mm inner circle diameter we used to plan the project above in millimeters shows the trapezoid top length on page 5 is 55 mm .

The red base length number and the green top length number are used to calculate the strip width. The strip width calculation is explained on page 3. The strip width used to make the border above is about 55 mm in both the inch and millimeter project above.

# The 8 Trapezoid Ring 

All sizes are not available in the inch and metric charts and it is suggested that you modify your project slightly to the sizes listed.

Important: If you need a size not listed you must pick the next larger size for the outer circle (red number in mm ) and the next smaller size for the inner circle (green number in mm) to make the strip width calculations.

The inch and millimeter examples should help you understand the charts. The 10 inch plate is 2 mm larger than the 252 mm plate. The strip width ends up being the 1 mm larger on the millimeter example because the border is slightly larger.

8 Trapezoid Strip Width Formula
(base length -top length) $\div 2 \times 2.414$ = strip width
round up strip width to next millimeter if decimal greater than . 3

## Inch example - 8 Trapezoid Ring

10 inch plate... 8 inch center circle with a 1 inch border. Border made from 8 trapezoids.

1. Go to page 4 and find the base length for a 10 inch circle. Base lengths are red numbers.
base length found $=111 \mathrm{~mm}$
2. Go to page 4 and find the top length for a 8 inch circle. Top lengths are green numbers.
top length found $=75 \mathrm{~mm}$
3. Calculate trapezoid strip width.
$111-75=36 \div 2=18 \times 2.414=43.452$ round up to 44 mm strip width
4. Use 44 mm wide strips and a $67.5^{\circ}$ angle to make 8 trapezoids with a base length of 111 mm .

## Millimeter example - 8 Trapezoid Ring

252 mm plate... 200 mm center circle with a 26 mm border. Border made from 8 trapezoids.

1. Go to page 5 and find the base length for a 252 mm circle. Base lengths are red numbers.
base length found $=110 \mathrm{~mm}$
2. Go to page 5 and find the top length for a 200 mm circle. Top lengths are green numbers.
top length found $=73 \mathrm{~mm}$
3. Calculate trapezoid strip width.

$$
110-73=37 \div 2=18.5 \times 2.414=44.659
$$

round to 45 mm strip width
4. Use 45 mm wide strips and a $67.5^{\circ}$ angle to make 8 trapezoids with a base length of 110 mm .

## Inch Circle Sizes 8 Trapezoid Ring

Although you have planned your project in inches you will be sizing trapezoids for the 8 Trapezoid Ring in millimeters.

From the chart, find the circle size of your project and select the red number in that row. The red number is in millimeters and it is the base length of the trapezoids you will make.

From the chart, find the diameter of your inner border and select the green number from that row. The green number is the top length of the trapezoid.

Once you have a red number and a green number you can calculate the strip width needed to make the 8 trapezoids on your Portable Glass Shop.

Half of the circle's diameter is the radius. To make your border elements from the trapezoids, using your Circle \& border equipment, you will use the radius. The blue number on the right side of the chart is the radius and the black number is the diameter.

Important: If you have a circle size between 2 inches and 14 inches that is not listed you will need to go to the next size larger for the red numbers and the next size smaller for the green numbers.

| Circle Diameter | 8 Trapezoid base length | 8 Trapezoid top length | Circle Diameter | Circle <br> Radius |
| :---: | :---: | :---: | :---: | :---: |
| 2 inch | 27 mm | 16 mm | 2 inch | 1 inch |
| 2.25 | 29 | 19 | 2.25 | 1.125 |
| 2.5 | 32 | 21 | 2.5 | 1.25 |
| 2.75 | 35 | 24 | 2.75 | 1.375 |
| 3 | 37 | 26 | 3 | 1.5 |
| 3.25 | 40 | 28 | 3.25 | 1.625 |
| 3.5 | 43 | 31 | 3.5 | 1.75 |
| 3.75 | 45 | 33 | 3.75 | 1.875 |
| 4 | 48 | 36 | 4 | 2 |

## 8 Millimeter Circle Sizes 8 Trapezoid Ring

From the chart, find the circle size of your project and select the red number in that row. The red number is the base length for the trapezoid.

From the chart, find the diameter of your inner border and select the green number from that row. The green number is the top length of the trapezoid.

Once you have a red number and a green number you can calculate the strip width needed to make the 8 trapezoids on your Portable Glass Shop.

| Circle Diameter | $\begin{gathered} 8 \\ \text { Base } \end{gathered}$ | $\begin{gathered} 8 \\ \text { Top } \end{gathered}$ | Circle <br> Radius |
| :---: | :---: | :---: | :---: |

## For 8 Trapezoid Ring - Calculating Strip Length for Multiple Trapezoids

Once you determine the strip width needed for your project you may want to know something about the strip length.

When more than one trapezoids are made from a strip the angles and the end scrap make the length harder to determine. You can often avoid costly mistakes by knowing in advance the strip length needed for one or more trapezoids.

The examples below will show you how to calculate the strip length for one or more trapezoid. Simple math is all that is needed.

Using the spreadsheet file named "Trapezoid Strip Width" can make the trapezoid calculations easier for you. Using the charts, from this PDF, and the Excel or Numbers application on your computer, you can quickly find the strip width and the strip lengths required for multiple trapezoids.

## Example for 8 Trapezoid Ring

From inch chart on page 4
10 inch outer circle - 111 mm base length 8 inch inner circle - 75 mm top length

## 1. $12+$ base = length <br> $$
12+111=123 \mathrm{~mm}
$$

## Zero Border Option - Millimeters or Inches

There may be a reason why you would want to make just one score to your 8 trapezoids instead of the two. This is very easy to do but you should think of the one score as a " 0 " border to calculate the strip width of your trapezoids.

Example: This will be the same for inches \& millimeters. If you wanted a 10 inch circle to be your "0" border you will first go to the inch chart and get the red number for 10 inches ( 111 mm ) and then get the green number for 10 inches ( 94 mm ). Once you have the 2 numbers you will calculate the same as for any border to get the strip width for a 8 trapezoid ring.
$111 \mathrm{~mm}-94 \mathrm{~mm}=17 \div 2=8.5$

## $8.5 \times 2.414=20.519 \mathrm{~mm}$

round to 21 mm strip width
Make 8 trapezoids from 21 mm strips using a $67.5^{\circ}$ degree angle setting and a 111 mm base length.
